DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Pre-Appeal Conference Request, filed June 29, 2010, with respect to the rejection(s) of claims 33-36 under 35 U.S.C. 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of a newly found prior art reference.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 33-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Galin (U.S. Patent No. 4,443,441).

With respect to **claim 33**: Galin discloses an ophthalmic formulation in aqueous solution for topical administration, comprising: a sterile aqueous carrier (Col. 2, line 11); and a pharmaceutically active compound consisting essentially of phentolamine in a therapeutically effective amount, namely 0.1 -1 % by weight composition with a water solvent, to contract a pupil of a human patient's eye in dim light so that the pupil is effectively reduced to improve vision in dim light and further to minimize eye redness.

Art Unit: 3761

With respect to **claim 34**: The pharmaceutically active compound disclosed by Galin is present in an amount of 0.1-1% by weight of the ophthalmic solution. As the solvent and major component of the solution is water, and one gram is present in every one cubic centimeter, the active agent is present in an amount of 0.001-0.01 g (1-10 mg) per milligram of solvent or more. Since there are other components in the solution, the weight percent in water of the agent will be greater than the weight percent of agent in solution. This overlaps the claimed range of from about 0.01 milligrams per cubic centimeter of solvent to about 50 milligrams per cubic centimeter of solvent.

With respect to **claim 35**: The sterile aqueous carrier disclosed by Galin comprises purified water, sodium acetate, boric acid and phenylmercuric nitrate and thus it is the examiner's position that the sterile carrier meets the limitation of an ophthalmic artificial tear solution. (Col. 2, lines 3-12)

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 36 is rejected under 35 U.S.C. 103(a) as being unpatentable over Galin ('441).

With respect to **claim 36**: It is the examiner's position that since Galin discloses an active agent identical to some disclosed by applicant (e.g. phentolamine), though Galin does not explicitly disclose that the pupil is effectively reduced by 1.0 mm or more, one of ordinary skill in the art can reasonably expect that the solution disclosed by Galin will accomplish this result, rendering claim 36 unpatentable.
